# 1.Introduction

Write the description of the mission and the requirements of this web site.

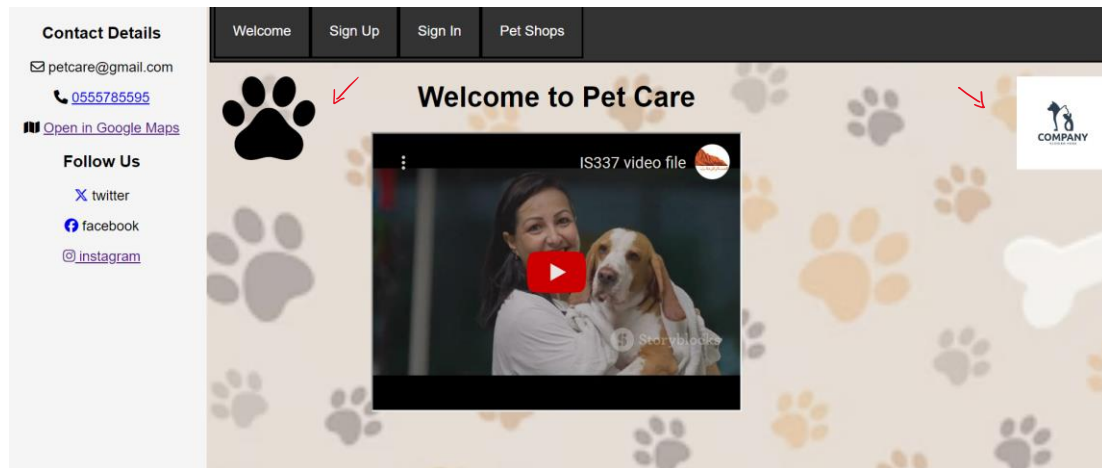

This is an assignment built by students at Imam Mohammed Ibn Saud Islamic University college of computer science, we had the unique opportunity to blend creativity and technical knowledge in this assignment. The task involved developing a pet-themed web application, a challenge that extended beyond basic coding in HTML5 and CSS3. This assignment was a journey into creating a digital environment that was not only user-centric but also engaging and interactive. It represented the heart of modern web design: functional, aesthetic, and user-friendly, all while focusing on an environmentally significant theme.

In completing this assignment, we designed a web application that emphasizes user engagement with a focus on pets. Leveraging skills in HTML5 and CSS3, we developed a visually appealing and functional interface. Key features of our application included a custom logo, detailed contact information, accessible social media links, an eye-catching background image, and an intuitive navigation bar. The navigation bar, featuring sections like 'Welcome,' 'Sign Up,' 'Sign In,' and 'Pet Shops,' was crafted to enhance the overall user experience and engagement.

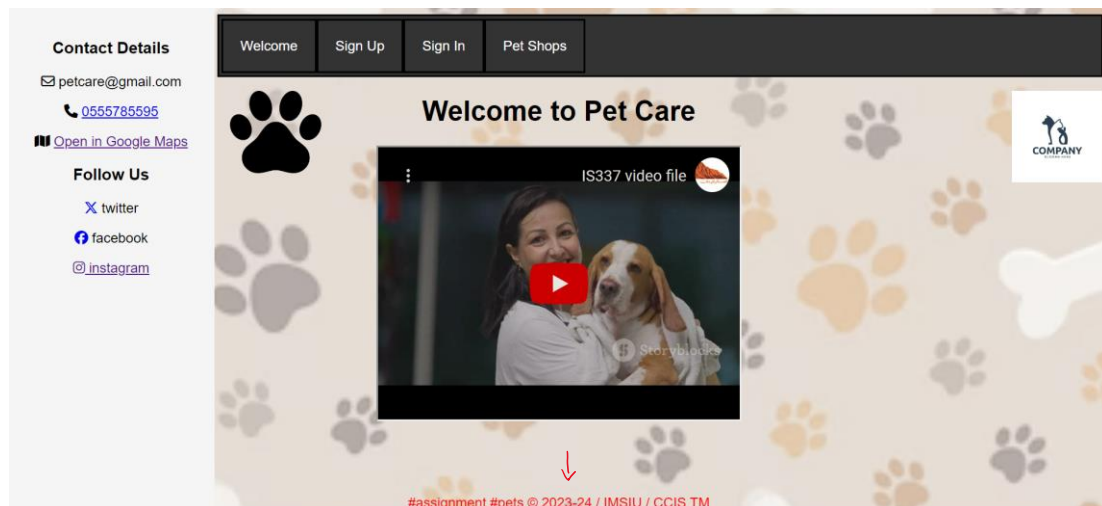

## 2.Requirements Screenshots

Provide all the screenshots answering requirements

### 3.Conclusions

Write a closure paragraph of what this web page provides to pets page members along with a description of technologies used and how you used them to succeed the final goal of this project.

This web application offers an invaluable platform for pet page members. It serves as a hub for information and interaction, catering specifically to the needs and interests of pet owners and enthusiasts. The use of HTML5 and CSS3 was pivotal in this project, allowing for the creation of a responsive and aesthetically pleasing interface. HTML5 facilitated the structuring of content in a meaningful and accessible way, while CSS3 was employed to enhance the visual appeal and user experience. By integrating these technologies, I was able to craft an application that not only meets the functional requirements but also engages the community effectively. The successful completion of this project lies in the seamless blend of these technologies, ensuring an enriching experience for pet page members and contributing positively to the overarching goal.

## 4.APPENDIX

Give HTML and CSS important pieces from your own code that you think important

### the main page code

```
<!DOCTYPE html> <!-- Defines the document type -->
